

SECUREVIEW

HIGHLY EVOLVED SECURITY

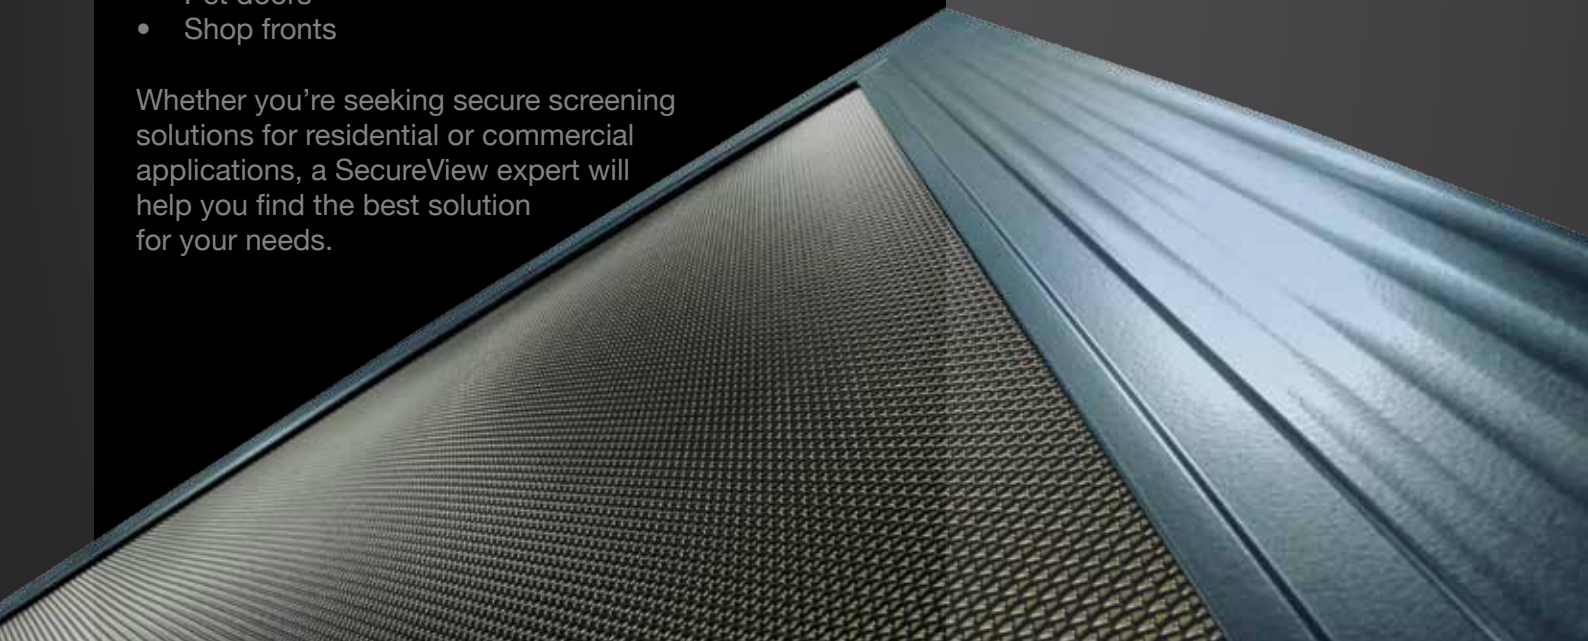

Art & Science Meet to Create the Ultimate Stainless Steel Security Screens.

*Characterised by minimalist
design and innovative technology,
SecureView is no ordinary
security screen.*

SecureView state-of-the-art security screens may be used
in a range of environments including:

- Sliding doors and windows
- Hinged doors
- Fire and emergency exits
- Casement, awning and double hung windows
- Balustrades and pool fencing
- Cyclone screens
- Outdoor room extensions
- Pet doors
- Shop fronts

Whether you're seeking secure screening
solutions for residential or commercial
applications, a SecureView expert will
help you find the best solution
for your needs.

Technically Perfect Design.

T316 Marine Grade Stainless Steel Mesh

SecureView security mesh is made from the finest T316 marine grade stainless steel, expertly woven in state-of-the-art facilities. T316 is selected for its superb strength, durability and resistance to corrosion, making it perfect for all Australian conditions.

3M VHB Acrylic Adhesive

SecureView is free from old-fashioned screws and rivets. Instead, SecureView employs 3M VHB high performance adhesive technology to create maximum strength. The acrylic chemistry of the 3M VHB adhesive delivers exceptional durability whilst its viscoelasticity provides superior energy absorbing properties that help eliminate stress points. This means SecureView screens absorb violent impacts over the full perimeter of the frame, keeping your property safe from assault.

To view the strength of this amazing technology, visit www.secureview.com.au.

Innovative Keyway Fixing System

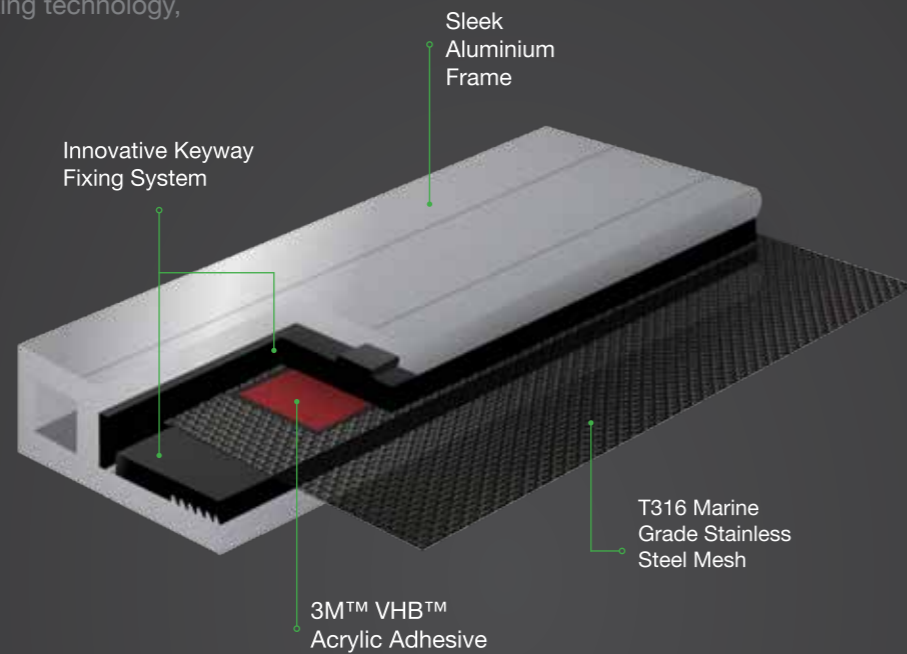

SecureView employs a unique two-part fixing system, which is designed to create the precise pressure required to activate the 3M VHB adhesive to its full potential. Both our wedges are made from UV stabilised PVC to yield superior protection over time. SecureView uses an innovative technology that works to eliminate galvanic corrosion experienced in old-fashioned mechanically fixed screws or rivets.

Three Point Locking System

SecureView hinged doors are characterised by our integrated three-point locking system as standard.

Sleek Aluminium Frame

Our SecureView extruded aluminium frame delivers a lightweight solution with superior strength. The frame features gold accredited Interpon powdercoating that delivers a durable finish in an extensive selection of colours, including the popular Colourbond range.

A Splash Of Colour

SecureView has an extensive colour range designed to blend effortlessly into your home. We have a classic colour range or we can custom match the colour of your choice. Your local SecureView expert can advise the right colour finish for your home.

The Warmth Of Wood

SecureView can match the earthy warmth of wood to the aesthetics of your home without sacrificing your security. Our wood effect finish provides a stunning replication of wood for an understated touch of elegance.

Effortless Elegance.
Enviably Strength.

Proven High Performance

The Australian Standards stipulate a range of scientific tests that a security product must pass in order to remain in its class. SecureView continually surpasses these standards. To find out more visit www.secureview.com.au.

Security	
Australian Standard AS5039-2008	SecureView security screens continually surpass a range of rigorous sheer knife tests, impact tests, jemmy tests and pull tests. These tests ensure the intrinsic strength and structural integrity of our manufactured security doors and windows are maintained.
Fire	
Australian Standard AS3954-2009	Bush Fire Protection SecureView stainless steel security doors have been tested under this standard and satisfied the requirements for bushfire attack level (BAL)12.5,19,29,40
Australian Standard AS1530.4-2005, Appendix B7	Fire Attenuation Test SecureView security screens have been tested in general accordance with this standard when exposed to incident radiant heat SecureView achieves 45.6% reduction in radiant heat flux between the inside and outside of the product.
Cyclonic	
Australian Standard 2010: AS/NZS1170.2	In cyclonic regions windows and doors may need to be protected from flying debris simulating a category 3 cyclone. SecureView security screens have been tested and surpass this standard, resisting the 4kg, 100mm x 50mm timber travelling at 15 metres per second. (m/s)
